

Our school is getting solar panels!

What is the CONCERTO project?

- ☀ European project running in 35 Countries
- ☀ Part funded by the European commission
- ☀ Bringing together energy efficiency and renewable energy
- ☀ Creating sustainable communities

Why has our school been chosen?

The project is running in six schools in Lambeth, we are one of them because of the location and position of our roof.

What will the solar panels do?

We will have both photovoltaic (PV) and thermal panels, the PV will help us with electricity and the solar thermal will help us with hot water and heating. We can help by making our school as energy efficient as possible.

What will they look like?

The panels will look similar to these. You may have noticed them on peoples houses, see if you can spot any!

When will we get them?

The panels will be installed by January next year!
